

A chip off the old block

Same great card - enhanced security

Exchange Bank is now offering EMV chip technology.

Your next card will offer you **BIG** protection with a tiny chip.

Q: What is a chip card?

A: Your EXB card now features built-in chip technology. You'll enjoy global acceptance plus an enhanced level of security.

Q: How does chip technology protect my information?

A: Whenever you use your card at a chip-activated terminal, the embedded chip generates a one-time use code. This code is virtually impossible to counterfeit and helps reduce in-store fraud.

Q: Where can I use my chip card?

A: You can use your card at millions of places that accept Visa cards, at home and around the world.

Q: Can I swipe my card to pay?

A: Yes. If a merchant is not yet chip-activated, you can continue to swipe your card. Keep in mind, you may need to sign for your purchase.

Have questions? Visit exba.com or contact us at 256.547.2572

When a chip-activated terminal is available, follow these easy steps:

- ① Insert the chip end of the card into the terminal with the chip facing up.
- ② Keep the card in the terminal throughout the transaction and follow the prompts on screen.
- ③ Remove your card when prompted and take your receipt.

Chip-activated terminals are already available at some U.S. retailers - and more locations are added every day.
